Python Tutorial for Beginners 1: Install and Setup for Windows

- Go to python.org
- Press "Downloads".
- Download Python 3.
- Turn on the option "Add Python 3.8 to PATH".
- Press "Install Now".
- After it says "Setup was successful" press "Close".
- Open cmd. And type "python --version" then "Enter" to check for the correct Python version.
- Open Windows Start button and look for IDLE (Python 3.8 32-bit).
- Open IDLE Python
- Open New File from the File tab.
- Type "print('Hello World')" and save the file named as Intro.
- Go to Command Prompt
- Type "python Desktop/Intro.py
- Press Enter and cmd should print "Hello World".
- We can write a comment by starting a line with #. Like "# Print Welcome Message". When the programs are run, the comments are ignored. (only seen by the developer/programmer)
- If you are going to do a lot of programming, upgrade the editor to something like Sublime Text, Atom, or Pycharm.
